

Lockers and cabinets for changing rooms

Order, cleanliness and security in a modular system

The metal lockers and its various accessories create a modular system with multiple configurations, adapting to different spaces and uses.

The metal cabinets or lockers for changing rooms provide a compact, visually attractive design that integrates into any setting: offices, gyms, cloakrooms, sports clubs, etc.

They come with frames built into the sides, exclusive attachment systems, with and without legs, etc. Each of its components has been studied to form an altogether robust unit.

Advantages

Flexibility and an easy boltless assembly

1

Style and sturdiness

A compact design with a professional finish suited to any setting.

2

Modular system

There are multiple possible standard combinations and accessories. Starting with an initial block, up to four additional units can be assembled, creating homogeneous sets.

- **One, two or four doors:** the modular door system allows partitioning of space as needed.
- **Two models and three different widths:** models with and without legs are manufactured in three widths: 25, 30 and 40 cm. Legless models are 180 cm high, 195 cm high with legs, and always 50 cm deep.
- **Reversible doors:** doors can be installed opening to the left or right. Garments and personal items are easily placed thanks to a frame designed to open fully.
- **Interior layout:** the placement of shelves and vertical dividers make different distributions of the space inside.

3

Quality guaranteed

They are manufactured in cold rolled steel, treated with high-quality, unique processes that ensure high durability and anti-corrosion properties.

- All **the structural components** are made of galvanised sheet metal.
- The **doors** are painted in RAL 5010 blue with an embossed finish. For galvanised finishes, please consult the technical department.

4

Easy assembly

Putting together these lockers is incredibly simple, with no bolts or tools needed.

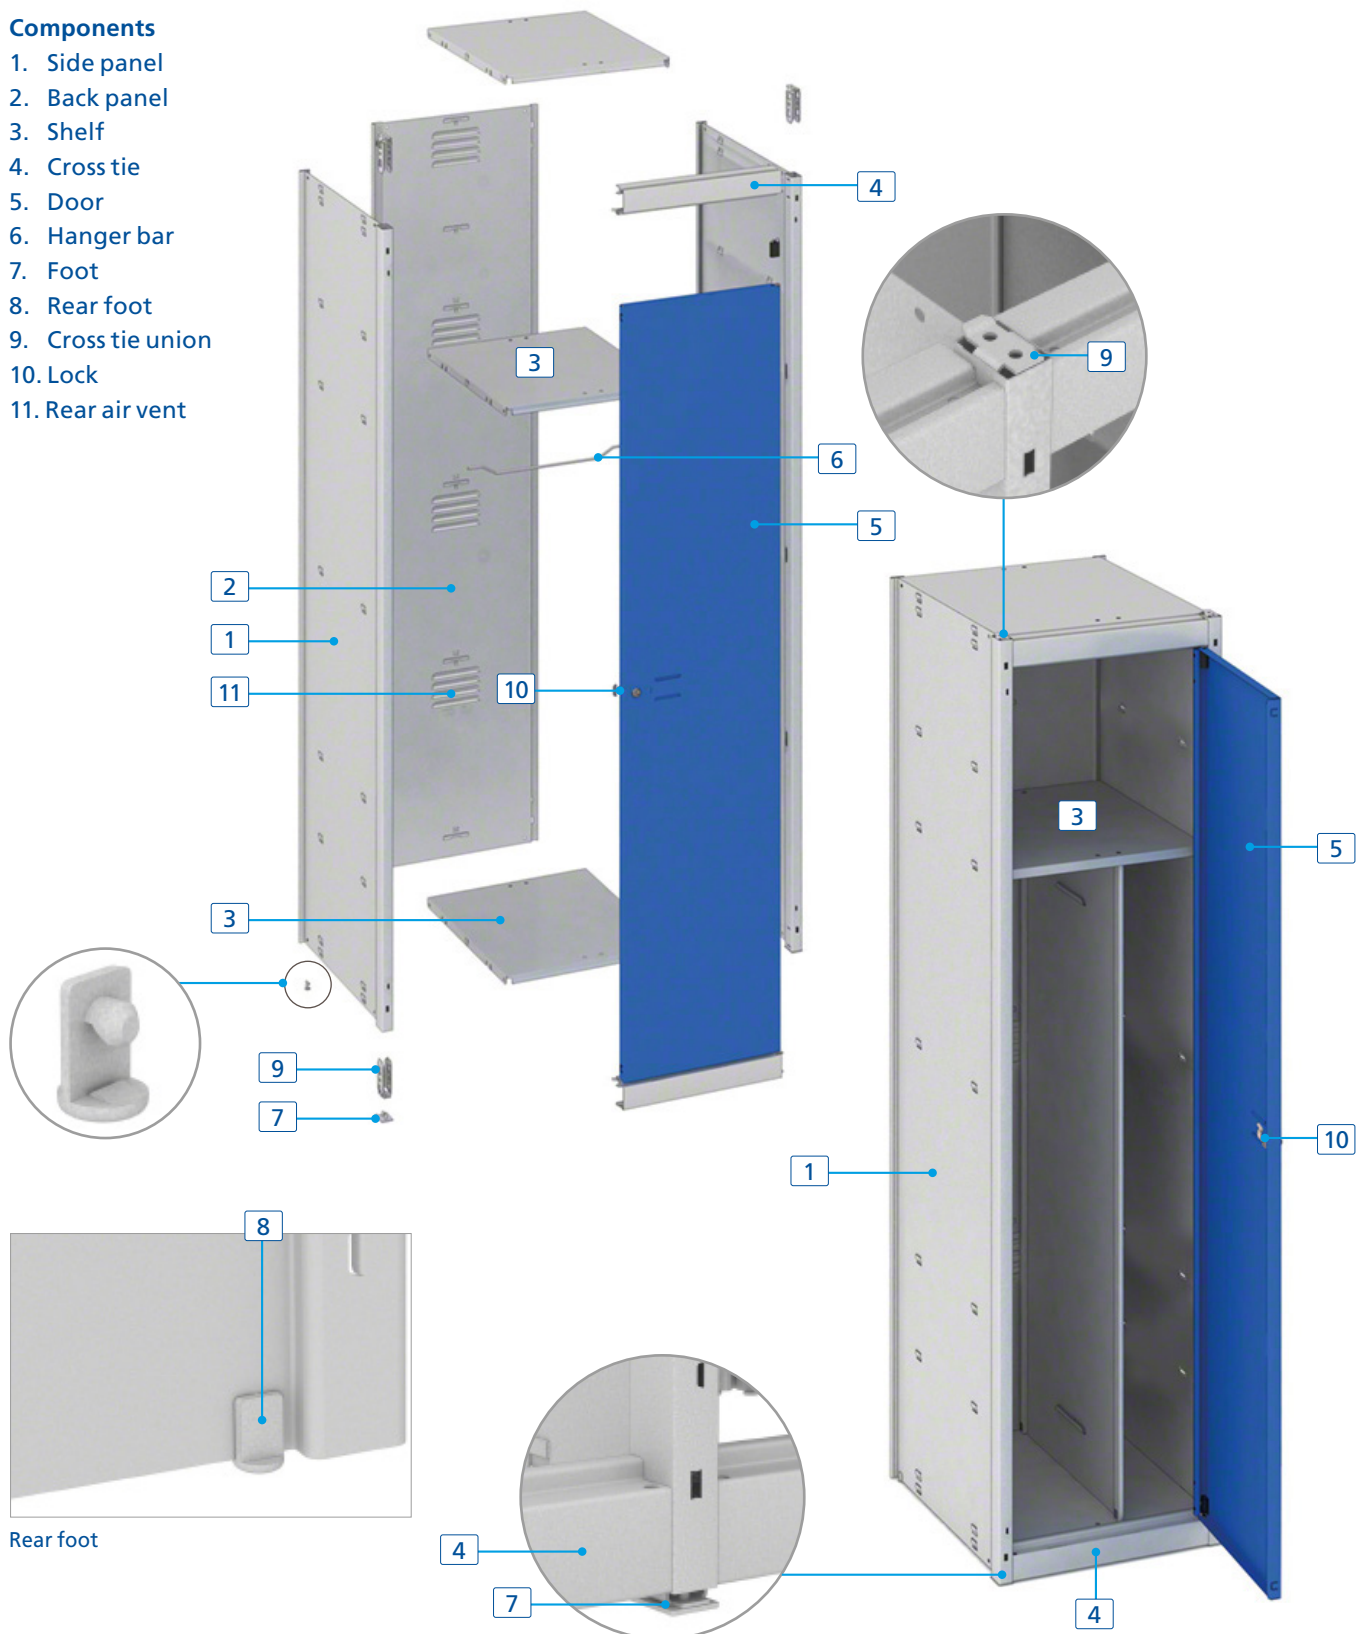

They come in groups of five units, making it possible to align as many lockers as wanted, regardless of their type.

Components

Versatility and adaptability for all types of uses

Components

1. Side panel
2. Back panel
3. Shelf
4. Cross tie
5. Door
6. Hanger bar
7. Foot
8. Rear foot
9. Cross tie union
10. Lock
11. Rear air vent

Rear foot

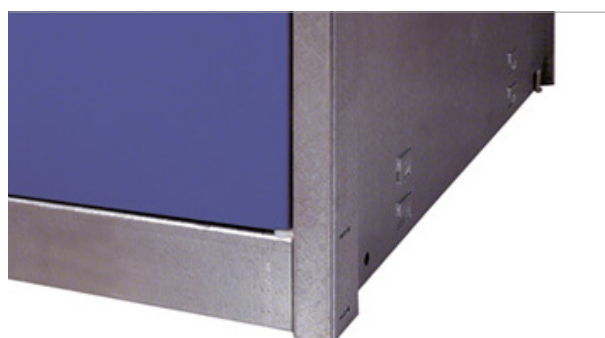

Rear air vent (11)

The vents are located on the back panels, leaving the front completely smooth.

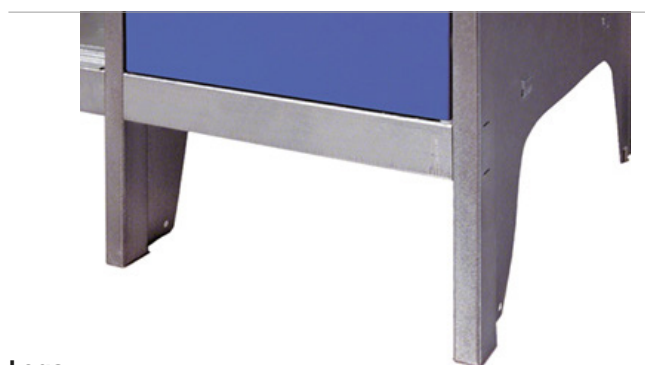

Reinforced doors (5)

The 40 cm wide locker doors are reinforced. Single door units are made out of two panels assembled together but not welded, which provides high rigidity and a perfect finish.

Plinth

Plinth prevents the accumulation of dirt under the locker, in addition to providing a clean-cut finish to the set.

Legs

Lockers with legs are installed in places that need constant cleaning of the changing room floors.

Accessories

The system incorporates different accessories to create custom combinations

Decorative side panel

This accessory improves the look of the outsides of the metal cabinets. The finish is more visually attractive.

Sloping tops

This element fits into the sides of the lockers and allows easy cleaning of the top. It also prevents objects from accumulating or being placed there. A double top piece to cover two units or a single piece are available.

Internal dividers

A vertical partition located in the centre of the locker can divide the space inside into two separate compartments. In 40 cm wide ones the divider can be displaced.

Lock and card holder

There are two kinds of locks, for keys and set up for padlock use. Beside, there is a practical card holder for the personal identification of each locker.

Hanger bars

These fit into the shelves easily and safely.

Benches

Made of steel with varnished pine planks, they are excellent for any type of changing room, being very hardy and low maintenance.
